Story

Date	28 October 2026
Team ID	EN25CS3090269
Project Name	Smart Healthcare Analytics
Maximum Marks	5 Marks

By using stories in Tableau, you can effectively communicate complex data in a way that is both interactive and engaging, making it easier for the audience to follow along and understand the insights. It's a tool for **data storytelling**, allowing you to present insights in a cohesive, engaging way that takes viewers through a logical progression of findings or analyses.

In Tableau, **Story** is a feature that allows you to create a sequence of dashboards, visualizations, and text to present data insights in a cohesive and narrative-driven way. It's like a slideshow within Tableau that guides the audience through a series of data points, helping them understand key insights, trends, or outcomes of your analysis.

Observations :

- **Balanced Exercise Level Distribution:** The Moderate exercise category contains the highest number of patients at 1,677, closely followed by Active at 1,676 and Sedentary at 1,647.

- **Moderate Exercise Is the Largest Category:** The three exercise groups have relatively similar patient counts, indicating a balanced distribution of exercise levels in the dataset.

- **Small Difference Between Active and Moderate Groups:** Only one patient separates the Active and Moderate categories, showing that their recorded counts are almost identical.

- **Sedentary Group Has the Lowest Count:** The Sedentary category contains 1,647 patients, which is 30 fewer than the Moderate category.

- **Interactive Story Navigation:** The Tableau Story presents multiple healthcare visualisations through navigation tabs, allowing users to explore exercise distribution, average blood pressure, alcohol and smoking consumption, BMI-related indicators, and patient demographics.

Activity 2:

Publish Story on Tableau Public and Paste Public link below :
